SUMMARY

AI/ML-focused Information Science engineering graduate who turns data into working models and applications. Built and tuned classification and regression models for lead scoring, insurance cost, heart disease and flight fare prediction, comparing algorithms on accuracy, F1, MAE, RMSE and R^2. Also developed a RAG-based question answering system using OpenAI models and an agentic AI system that plans and executes multi-step tasks with tools. Strong in Python and SQL, with hands-on use of Git, Jupyter, Google Colab, Matplotlib and Power BI. Seeking ML Engineer, Data Scientist and AI Engineer roles.

TECHNICAL SKILLS

Programming: Python, SQL

AI / ML: RAG, LLMs, Generative AI, Agentic AI

Visualization: Matplotlib, Power BI

Tools: Git, GitHub, VS Code, Jupyter Notebook, Google Colab

INTERNSHIPS

AI Engineer Intern – Rubixe *2026*

- Built machine learning models in Python, including Insurance Cost Prediction, Sales Effectiveness (lead scoring) and Heart Disease Prediction.
- Compared multiple algorithms per model, evaluating classification models on accuracy, precision, recall and F1, and regression models on MAE, RMSE and R^2.

AI with Cloud Computing Intern – SuprMentr Technologies Pvt Ltd *2026*

- Built a Flight Fare Prediction model, comparing Linear Regression, Decision Tree, Random Forest, Gradient Boosting and XGBoost, with hyperparameter tuning on Random Forest and XGBoost.
- Compared models on R^2 score, with tuned XGBoost performing best.

PROJECTS

Agentic AI System *Python, LLMs, Agentic AI*

- Built an agentic AI system where an LLM plans and carries out multi-step tasks using tools.

RAG Question Answering System *Python, OpenAI, RAG*

- Developed a question answering system that retrieves relevant document context and uses OpenAI models to generate grounded answers.

Sales Effectiveness – Lead Scoring *Python, SQL, Machine Learning*

- Built and compared classification models (Decision Tree, Logistic Regression, Random Forest, SVM, HistGradientBoosting) to label FicZon Inc leads as High or Low potential, using ~7,400 lead records from a MySQL database.
- Evaluated on accuracy and High Potential precision, recall and F1; tuned Logistic Regression gave the best F1 with the highest recall.

Insurance Cost Prediction *Python, Regression*

- Trained and compared Linear, Ridge, Random Forest and Gradient Boosting regression models to predict medical insurance charges.
- Gradient Boosting performed best, outperforming Linear, Ridge and Random Forest on MAE, RMSE and R^2.

EDUCATION

BE in Information Science and Engineering *2026*

City Engineering College, Bengaluru | *CGPA: 7.8*

CERTIFICATIONS & COURSES

- AI Engineer Course – DataMites
- Hands-on Workshop on MERN Stack – Edunet
